

# SI 2 : Lists and More Advanced Induction

## 1 List Vocabulary Review

For:

$$L = [a, b, c]$$

$$K = [1, 2, 3]$$

$$M = [\text{red}, \text{green}, \text{blue}]$$

Give the results of the following operations:

1.  $L++M$
2.  $L++M++K$
3.  $c::K$
4.  $M::K$
5.  $c::b$
6.  $c++L$

## 2 Proofs With Lists

7. Prove:  $\text{rev}(A++B) = \text{rev}(B)++\text{rev}(A)$
8. For a list  $L$  in which no elements repeat, and  $i, j \in \mathbb{N}$  such that  $i, j < \text{len}(L)$  and  $i \neq j$ , prove that  $L_i \neq L_j$
9. Prove: For two lists  $K$  and  $L$ , if  $\text{len}(K) = \text{len}(L)$ , then  $\text{len}(K++L) = 2\text{len}(L)$

## 3 A More Difficult Inductive Proof

**Prove:** For a tower of  $n$  disks, it takes  $2^n - 1$  moves to solve the problem of the Towers of Hanoi.

**The problem of the Towers of Hanoi:** There are  $n$  disks stacked on one of 3 pegs, ordered from smallest disk to largest (smallest disk on the top). The task is to move all the disks to another peg following this set of rules:

- Only one disk may be moved at a time
- No disk may be placed on a peg with a smaller disk underneath it
